

Nano103 CMSIS BSP Directory

Directory Introduction for 32-bit NuMicro™ Family

Directory Information

Document	Driver reference manual and revision history.
Library	Driver header and source files.
SampleCode	Driver sample code.

The information described in this document is the exclusive intellectual property of Nuvoton Technology Corporation and shall not be reproduced without permission from Nuvoton.

*Nuvoton is providing this document only for reference purposes of NuMicro microcontroller based system design.

1 Document Information

CMSIS.html	Document of CMSIS version 4.5.0
NuMicro Nano103 CMSIS BSP Revision History.pdf	This document shows the revision history of Nano103 BSP.
NuMicro Nano103 Driver Reference Guide.chm	This document describes the usage of drivers in Nano103 BSP.

2 Library Information

CMSIS	Cortex [®] Microcontroller Software Interface Standard (CMSIS) V4.5.0 definitions by ARM [®] Corp.
Device	CMSIS compliant device header file.
SmartcardLib	Library for accessing a smartcard.
StdDriver	All peripheral driver header and source files.

3 Sample Code Information

Hard_Fault_Sample	Show hard fault information when hard fault happened.
NuTiny-EVB-NANO103	Sample code for Nano103 Tiny Board
PowerDown_Chk	Sample code which implements a function to test system state before entering power-down mode. If a system consumes more power than expected in power-down mode, this function can be used to check if there is any system setting that may cause power leakage.
Semihost	Show how to print and get character with IDE console window.
StdDriver	Demonstrate the usage of Nano103 MCU peripheral driver APIs.
Template	A project template for Nano103 MCU.

4 \SampleCode\NuTiny-EVB-NANO103

LED	Toggle PB.14 to turn on / off the board LED.
RTC_PowerDown	Demonstrate how to wake up system periodically with RTC interrupt.
SYS_OperatingCurrent_HIRC	Demonstrate how to minimize operating current while HCLK is from HIRC.
SYS_OperatingCurrent_MIRC	Demonstrate how to minimize operating current while HCLK is from MIRC.

5 \SampleCode\StdDriver

ACMP	Demonstrate Analog comparator (ACMP) comparison by comparing CMP0_P with Band-gap voltage and shows the result on UART console.
ADC_Compare	Demonstrate ADC conversion and comparison function by monitoring the conversion result of channel 0.
ADC_ContinuousScan	Convert ADC channel 0, 1, 2 in Continuous Scan mode and print conversion results.
ADC_PDMA	Use PDMA channel 1 to move ADC channel 0, 1, 2 converted data to SRAM
ADC_PWMTrigger	Configure PWM0 channel 0 to trigger ADC.
ADC_Single	Convert ADC channel 0 in Single mode and print conversion results.
ADC_Single_BandGap	Convert the band-gap voltage using an internal ADC channel.
ADC_Single_TempSensor	Convert temperature sensor voltage using an internal ADC channel.
ADC_Single_VBat	Convert the V _{BAT} voltage using an internal ADC channel.
ADC_SingleCycleScan	Convert ADC channel 0, 1, 2 in Single Cycle Scan mode and print conversion results.
ADC_TimerTrigger	Configure Timer0 to trigger ADC and move converted data to SRAM using PDMA.
CRC_CCITT	Calculate the CRC-CCITT checksum value by CRC DMA mode.
FMC_CRC32	Show FMC CRC32 calculating capability.
FMC_IAP	Demonstrate IAP (In-Application Programming) function. To run this sample, the boot mode must be "Boot from APROM with IAP".
FMC_ReadAllOne	Show FMC flash Read-All-One function.

FMC_RW	Show FMC read Flash IDs, erase, read, and write function.
FMC_SecurityKey	Show FMC security key function.
GPIO_IOTest	Use GPIO driver to control the GPIO pin direction and the high/low state, and show how to use GPIO interrupts.
GPIO_PowerDown	Demonstrate how to wake up system form Power-down mode by GPIO interrupt.
I2C_EEPROM	Read/write EEPROM via an I ² C interface.
I2C_Loopback	An I ² C master/slave demo by connecting I ² C0 and I ² C1 interface.
I2C_Wakeup	Demonstrate how to wake up system form Power-down mode by I ² C interrupt.
PDMA_Memory	Use PDMA channel 2 to demonstrate memory to memory transfer.
PWM_Capture	Demonstrate PWM Capture function by using PWM0 channel 2 to capture the output of PWM0 channel 0.
PWM_DeadZone	Demonstrate the dead-zone feature with PWM0.
RTC_Alarm_Test	Demonstrate the RTC alarm function which sets an alarm 10 seconds after execution.
RTC_Snoop_Detection	Show how to use RTC snoop detect function.
RTC_Time_Display	Demonstrate the RTC function and display the current time to the UART console.
SC_ReadATR	Read the smartcard ATR from smartcard 0 interface.
SC_ReadSimPhoneBook	Demonstrate how to read phone book information in the SIM card.
SCUART_TxRx	Demonstrate smartcard UART mode by connecting PC.4 and PC.6 pins.
SPI_FIFO_Flash	Access SPI Flash using FIFO mode.
SPI_LoopBack	Demonstrate SPI loop back transfer

SPI_TxRxLoopback_PDMA	Demonstrate SPI loop back transfer with PDMA.
SYS_CLKO	Demonstrate how to output different clocks one after another to the same CLKO (PB.2) pin.
SYS_Control	Demonstrate how to change different PLL settings for the system clock source, and output system clock to CLKO (PB.2) pin with the system clock / 4 frequency.
SYS_PLLClockOutput	Change system clock to different PLL frequency and output system clock from CLKO pin.
SYS_ScalableLDO	Demonstrate maximum system operating frequency with different LDO settings.
SYS_TrimIRC	Demonstrate how to use LXT to trim HIRC.
Timer_Delay	Demonstrate the usage of TIMER_Delay() API to generate a 1 second delay.
Timer_EventCounter	Use the pin PB.8 to demonstrate timer event counter function.
Timer_FreeCountingMode	Use the timer pin PD.11 to demonstrate timer free counting mode function. Also display the measured input frequency to UART console.
Timer_InterTimerTriggerMode	Use the timer pin PB.8 to demonstrate inter timer trigger mode function. Also display the measured input frequency to UART console.
Timer_Periodic	Use the timer periodic mode to generate timer interrupt every 1 second.
Timer_ToggleOut	Demonstrate the timer 0 toggle out function on pin PB.8.
Timer_TriggerCountingMode	Use the timer pin PD.11 to demonstrate timer trigger counting mode function. And displays the measured input frequency to UART console.
Timer_Wakeup	Use timer to wake up system from Power-down mode periodically.
UART_AutoBaudRate	Demonstrate how to use auto baud rate detection function.
UART_FlowCtrl	Transmit and receive data using auto flow control.

UART_IrDA	Show how to transmit and receive UART data in UART IrDA mode.
UART_LIN	Demonstrate how to transmit LIN header and response.
UART_PDMA	Demonstrate UART transmit and receive function with PDMA.
UART_RS485_Receive	Demonstrate how to receive data in UART RS485 mode.
UART_RS485_Transmit	Demonstrate how to transmit data in UART RS485 mode.
UART_Rx_Wakeup	Demonstrate how to wake up system form Power-down mode by UART interrupt.
UART_TxRx_Function	Transmit and receive data from PC terminal through RS232 interface.
WDT_Polling	Use Polling mode to check WDT time-out state and reset WDT after time-out occurs.
WDT_Wakeup	Use WDT to wake up system from Power-down mode periodically.
WWDT_Reload	Demonstrate the WWDT counter reload function.

Important Notice

Nuvoton Products are neither intended nor warranted for usage in systems or equipment, any malfunction or failure of which may cause loss of human life, bodily injury or severe property damage. Such applications are deemed, "Insecure Usage".

Insecure usage includes, but is not limited to: equipment for surgical implementation, atomic energy control instruments, airplane or spaceship instruments, the control or operation of dynamic, brake or safety systems designed for vehicular use, traffic signal instruments, all types of safety devices, and other applications intended to support or sustain life.

All Insecure Usage shall be made at customer's risk, and in the event that third parties lay claims to Nuvoton as a result of customer's Insecure Usage, customer shall indemnify the damages and liabilities thus incurred by Nuvoton.

*Please note that all data and specifications are subject to change without notice.
All the trademarks of products and companies mentioned in this datasheet belong to their respective owners.*
